Committee Members proposes that the Trinity and Gulf Coast Aquifers to be designated as non-relevant since there is no production within the GMA 13. The Edward Aquifer in Atascosa County was to be designated as non-relevant since they are regulated by the Edwards Aquifer Authority and non-relevant in Zavala County due to the absence of a Groundwater Conservation District. The committee discussed the Edwards aquifer in Frio County and noted that current wells produce an average artesian flow of 750 gallons. The GMA 13 Committee proposes a recommendation of a DFC of an average artesian flow of 500 gallons per minute. As for the Yegua-Jackson Aquifer the committee proposes the Scenario 4, Table C-1, GAM model Run T10-012 provided by the TWDB.

Ms. Savage moved to Adopt the DFC's for the remaining relevant aquifers in GMA 13 and Resolution #2010-02, with a second from Mr. Walker.
