

Fannin County Water Supply Planning Information & Resources

This document summarizes key water supply planning information for Fannin County and highlights planning and drought resources available from the Texas Water Development Board (TWDB). This document was developed to support regional water planning group outreach efforts aimed at improving engagement with small and rural entities.

All water utilities in the state are strongly encouraged to participate in the regional water planning process and utilize TWDB resources to ensure sufficient water supplies are available for all Texans in times of drought.

Definitions of common [regional water planning terms and acronyms are available at this link](#).

Future Water Supply Plans

Region C Regional Water Planning

Fannin County is located in the Region C Regional Water Planning Area, which encompasses all or parts of 16 counties in north Texas (Figure 1). The Region C Regional Water Planning Group is responsible for developing a regional water plan every five years based on conditions that the region would face under a recurrence of a historical drought of record. The results of the regional water plan are included in the state water plan and inform state financial assistance and surface water right permitting decisions. The 2026 plan is currently under development and due to the TWDB in October 2025.

Figure 1 – Region C Regional Water Planning Area

Public involvement is a key component to regional water planning. To ensure your water needs are accurately reflected in the 2026 plan, get involved in Region C water planning by visiting <https://regioncwater.org/> or contact the Trinity River Authority at longas@trinityra.org, 817-467-4343.

2021 Region C Regional Water Plan

The 2021 Region C Regional Water Plan is available at <http://www.twdb.texas.gov/waterplanning/rwp/plans/2021/index.asp>.

The following highlights from the plan are included in Attachment I

- Table A1 summarizes current water supply sources, 2020 and 2070 water supply needs, and recommended water management strategies for water user groups in Fannin County.
- Table A2 provides additional context on the severity of the identified water supply needs by expressing the needs as a percentage of each water user group's total demand. The larger the percent of an entity's total demand, the more severe a potential shortage may be.
- Table A3 presents unmet needs that remain even if all the recommended strategies in the plan were implemented.

Water Providers in Fannin County

Municipal Water User Groups

Public water systems provide potable water for public use and have at least 15 service connections or serve at least 25 individuals at least 60 days out of the year. Public water systems that provide more than 100 acre-feet of water per year for municipal use are considered municipal water user groups and are individually planned for in the regional water planning process. Note that some municipal water user groups include more than one public water system. Table 1 lists the Fannin County municipal water user groups for the 2026 regional water plan and associated public water systems that are located in the county.

Table 1. Fannin County municipal water user groups and associated public water systems

Water User Group	Associated Public Water Systems(s)
Arledge Ridge WSC	ARLEDGE RIDGE WSC (TX0740019) ^R
Bois D Arc MUD*	BOIS D ARC MUD (TX0740044) ^R
Bonham	CITY OF BONHAM (TX0740001) ^R
Delta County MUD*	DELTA COUNTY MUD (TX0600018) ^{R**}
Desert WSC*	DESERT WSC (TX0430032) ^R
Frognot WSC*	FROGNOT SUD (TX0430035) ^R
Hickory Creek SUD*	HICKORY CREEK SUD (TX1160062) ^R
Honey Grove	CITY OF HONEY GROVE (TX0740003) ^R
Ladonia	CITY OF LADONIA (TX0740004) ^R
Leonard	CITY OF LEONARD (TX0740005) ^R
North Hunt SUD*	NORTH HUNT SUD (TX1160039) ^R
Savoy	CITY OF SAVOY (TX0740006) ^{R**}
Southwest Fannin County SUD*	SOUTHWEST FANNIN COUNTY SUD (TX0740031) ^R
Trenton	CITY OF TRENTON (TX0740009) ^R
West Leonard WSC*	WEST LEONARD WSC (TX0740034) ^R
White Shed WSC	WHITE SHED WSC (TX0740035) ^R
Whitewright*	CITY OF WHITEWRIGHT (TX0910011) ^R
Wolfe City*	CITY OF WOLFE CITY (TX1160005) ^R

^R Public water system meets the definition of a rural political subdivision as defined in [Texas Water Code 15.001\(14\)](#).

* Water user group is split by more than one county. Public water systems associated with the water user group and located in Fannin County are shown.

** Current records show that the public water system did not submit a water use survey response in 2023.

County-Other Water Systems

County-other water systems are a subset of public water systems that provide on average less than 100 acre-feet of water per year for municipal use. For TWDB planning purposes, the following systems will be grouped together and planned for under the County-Other, Fannin water user group category in the 2026 regional water plan:

- BARTLEY WOODS WSC (TX0740021)^R
- CITY OF DODD CITY (TX0740002)^R
- CITY OF BAILEY (TX0740038)^R
- CITY OF ECTOR (TX0740007)^R

- CITY OF WINDOM (TX0740008)^R
- DIAL WSC (TX0740023)^R
- GOBER MUD (TX0740024)^R
- MCCRAW CHAPEL WSC (TX0740039)^R
- RANDOLPH WSC (TX0740027)^{R**}
- RAVENNA NUNNELEE WSC (TX0740036)^R

^R Public water system meets the definition of a rural political subdivision as defined in [Texas Water Code 15.001\(14\)](#).

** Current records show that the public water system did not submit a water use survey response in 2023.

Status of Water Systems and Supply

This section highlights potentially vulnerable water systems in Fannin County that serve a population of 7,500 or less and rely on a single water source and systems that have recently reported having 180 days or less of available supply.

Entities that are identified as 7,500 / sole source

The following entities were identified in the 2021 Region C Regional Water Plan as having a 2010 population less than 7,500 and relying on a sole source for their water supply regardless of whether that water is provided by a wholesale water provider. These entities are highlighted since they may be more vulnerable in times of drought or in the event of a loss of water supply.

- Bois D Arc MUD
- Delta County MUD*
- Ladonia
- White Shed WSC

* Water user group is split by more than one county.

The 2021 Region C Regional Water Plan presents potential emergency response options for entities with populations less than 7,500 that rely on a sole source and county-other water user groups in the region. Emergency response options could potentially include addition of a local groundwater well, trucking in water, importing supply from a nearby entity, or utilizing existing emergency interconnects. For the temporary emergency response options identified for entities in Fannin County, see [Chapter 7](#) of the 2021 Region C Regional Water Plan.

180-day Priority List occurrences

Retail public utilities are required by the Texas Commission on Environmental Quality (TCEQ) to report when the utility is reasonably certain that its water supply will be available for less than 180 days. Between January 2016 and November 2023, no public water systems in Fannin County reported having approximately 180 days or less of water supply remaining.

Key TWDB Resources for Water Planning & Drought

Interactive State Water Plan

The online [Interactive State Water Plan](https://texasstatewaterplan.org/) provides access to detailed planning data presented at varying geographic levels, through maps, tables, and additional graphics. Users can customize what they see, for example, by selecting data associated with a specific water use category or from a specific planning decade. The displayed data is also downloadable in a spreadsheet format.

To explore detailed planning data for Fannin County in the Interactive State Water Plan, visit <https://texasstatewaterplan.org/>.

Texas Water Service Boundary Viewer

The Texas Water Service Boundary Viewer (TWSBV) is a public water system service area mapping application that strives to provide the most up-to-date and best data available on the service areas for all community public water systems within Texas. The TWSBV also provides links to supplemental public water system information, including system specific data from the Drinking Water Watch (maintained by the TCEQ) as well as water use survey information.

The application is used to collect accurate retail water service boundaries to better estimate and project utility population and rural population not served by a system for the regional and state water plans.

Water systems are encouraged to use the application to verify that their service area boundaries on file are accurate and update them if changes have occurred. Information for editors (utilities) is available at: <http://bit.ly/ServiceBoundaryEditor>.

The public can view water system areas on file at <https://www2.twdb.texas.gov/apps/WaterServiceBoundaries>.

Water Use Survey

The TWDB is legislatively directed to provide planning and financial assistance for the development and management of water resources in Texas. This activity is dependent upon the accuracy and completeness of the information that water users provide in the annual Water Use Survey.

The TWDB annually collects and maintains information concerning current state water use in various reports accessible here: <https://www.twdb.texas.gov/waterplanning/waterusesurvey/estimates>

TWDB Water Loss Resources

Reducing water loss offers utilities the ability to increase their water use efficiency, improve their financial status, and assist with long-term water sustainability. Currently, all retail public water systems with more than 3,300 connections or a financial obligation to TWDB are required to annually complete and submit a [Water Loss Audit](#). All other retail public water suppliers are required to submit a water loss audit to the TWDB every five years. Water loss audits are required to be submitted by an individual [trained](#) in water loss auditing.

Water loss audits help determine the appropriate actions for water loss control but, only if the water loss audit data is validated. Starting in 2025, a Water Loss Audit is required to be validated if the utility has an existing financial obligation to TWDB or is applying financial assistance from TWDB. Visit the TWDB [Water Loss Audit Validation](#) webpage for more information.

TWDB staff are available to provide water loss audit assistance and work with utility staff to better understand how water loss audits can benefit their utility. For more information on leak detection, how to collect and report accurate data, and data validation, visit <https://www.twdb.texas.gov/conservation/municipal/waterloss/>.

TWDB Drought Resources

The TWDB offers a variety of resources to assist Texans with drought response and preparedness on the [TWDB Drought Resources webpage](#), including

[Water Data for Texas](#): Water Data for Texas provides information on reservoir storage levels, lake evaporation and precipitation, and water levels at the automated groundwater level wells among other types of information.

[Drought Dashboard](#): The TWDB's drought dashboard provides information on conditions across the state, including rainfall, temperature, streamflow, and soil moisture as well as various drought indices and U.S. Drought Monitor status.

[Water Weekly](#): Water weekly provides a weekly summary of drought conditions across the state.

[Texas Water Conditions Report](#): Report provides a monthly summary of the state's drought and water conditions.

TWDB Financial Assistance Programs

The TWDB offers a variety of cost-effective loan and grant programs that provide for the planning, acquisition, design, and construction of water related infrastructure and other water quality improvements. [Urgent need funding is available through the Drinking Water State Revolving Fund](#) to assist communities with addressing unforeseen situations that require immediate attention to protect public health and safety.

For more information about TWDB financial assistance programs, visit <http://www.twdb.texas.gov/financial/>, or contact TWDB at 512-463-0991, Financial_Assistance@twdb.texas.gov.

Texas Division of Emergency Management (TDEM)

The TDEM coordinates the state emergency management program, which is intended to ensure the state and its local governments respond to and recover from emergencies and disasters and implement plans and programs to help prevent or lessen the impact of emergencies and disasters. The chief of TDEM is the state drought manager and is responsible for managing and coordinating the drought response component of the state water plan. For more information, visit <https://www.tdem.texas.gov/> or contact 512-424-2208.

Texas Commission on Environmental Quality (TCEQ)

The TCEQ provides hands-on assistance to communities responding to drought, consults with public water systems about implementing drought contingency plans, tracks public drinking water systems under water-use restrictions, actively manages water in Watermaster Programs, answers the public drought-information hot line: 800-447-2827, and offers drought information on its website: <https://www.tceq.texas.gov/response/drought>.

In the event of a drinking water emergency, contact your [TCEQ regional office](#). For after-hours emergencies, call 1-888-777-3186.

Attachment I – 2021 Region C Regional Water Plan Summary Tables

Table A1. Fannin County planning summary

Water User Group	Current Water Supply Sources	2020 Water Need (acre-feet/year)	2070 Water Need (acre-feet/year)	Recommended Water Management Strategies
Arledge Ridge WSC	Woodbine Aquifer	0	336	Groundwater wells and other; Municipal conservation
Bois D Arc MUD	Woodbine Aquifer	2	641	Municipal conservation; New major reservoir
Bonham	Bonham Lake/Reservoir	0	3,693	Municipal conservation; New major reservoir
County-Other, Fannin	Sulphur Run-of-River; Trinity Aquifer; Woodbine Aquifer	0	3,203	Municipal conservation; New major reservoir
Delta County MUD*	Big Creek Lake/Reservoir	0	0	None
Desert WSC*	Woodbine Aquifer	0	122	Groundwater wells and other; Municipal conservation
Hickory Creek SUD*	Woodbine Aquifer	96	2,095	None
Honey Grove	Woodbine Aquifer	0	0	Municipal conservation; New major reservoir
Irrigation, Fannin	Other Aquifer; Red Run-of-River; Woodbine Aquifer	3,836	3,836	Agricultural conservation; Groundwater wells and other
Ladonia	Trinity Aquifer	0	203	Indirect reuse; Municipal conservation; New major reservoir; Other surface water
Leonard	Woodbine Aquifer	0	377	Municipal conservation; New major reservoir
Livestock, Fannin	Other Aquifer; Red Livestock Local Supply; Sulphur Livestock Local Supply; Trinity Aquifer; Trinity Livestock Local Supply; Woodbine Aquifer	0	0	None
Manufacturing, Fannin	Bonham Lake/Reservoir	0	6	Indirect reuse; New major reservoir; Other surface water
Mining, Fannin	Red Run-of-River	502	56	None
North Hunt SUD*	Tawakoni Lake/Reservoir; Woodbine Aquifer	89	888	Groundwater wells and other; Municipal conservation

Water User Group	Current Water Supply Sources	2020 Water Need (acre-feet/year)	2070 Water Need (acre-feet/year)	Recommended Water Management Strategies
Southwest Fannin County SUD*	Woodbine Aquifer	0	704	Groundwater wells and other; Municipal conservation; New major reservoir
Trenton	Woodbine Aquifer	0	1,644	Groundwater wells and other; Municipal conservation; New major reservoir
West Leonard WSC*	Woodbine Aquifer	0	0	Municipal conservation
White Shed WSC	Woodbine Aquifer	0	697	Groundwater wells and other; Municipal conservation
Whitewright*	Woodbine Aquifer	0	0	Municipal conservation; Other strategies; Other surface water
Wolfe City*	Turkey Creek Lake/Reservoir; Woodbine Aquifer	0	308	Municipal conservation; Other surface water

* Water user group is split by more than one county. Table presents the water user group's total summary data for all related counties.

Table A2. Fannin County projected needs of every water user group, as a share of total demand (percent)

Water User Group	2020	2030	2040	2050	2060	2070
Arledge Ridge WSC	-	-	7	29	51	64
